

I have been a loyal XM subscriber for about 2 years. I purchased the product so I could stay in touch with the rest of the world while traveling through the remote mountains of Colorado. Once I heard that XM had expanded its coverage to include weather and traffic I was excited, because of the increased safety associated with traveling.

There are many areas of the United States where conventional AM or FM can not be recieved. In those areas the services of XM radio become a very valuable safety tool.

Please do not cancel or limit the services of XM radio, its a basic first admendment right, and is also an important safety tool for explorers of the American land.

Thanks
